Completion of Early earthworks for Western Sydney International Airport

Early earthworks for Western Sydney International have been completed, with major earthworks now underway.

The Early earthworks project began in September 2018, to help prepare the foundations for Sydney's new airport. Work included:

- moving 1.8 million cubic metres of earth,
- clearing and remediation,
- construction of a new and realigned Badgerys Creek Road,
- installing utilities and temporary works, and
- construction of a new intersection at Elizabeth Drive, in collaboration with Transport for NSW

Some final close out activities are still required, including installing barriers around Pitt Street, landscaping and demobilising equipment, which will be completed over the coming month.

The Early earthworks project has been delivered by the CPB Contractors and Lendlease Joint Venture (CPBLLJV).

We sincerely thank residents, motorists and local businesses for their patience while early earthworks activities have taken place.
